Profile

Backend Developer with hands-on experience delivering production-ready systems — including a live ERP platform actively used by a real business. Specialized in building scalable REST APIs, real-time features with Socket.IO, and cloud-integrated backends using Node.js, NestJS, and Express.js. Comfortable with AWS S3, Docker, and Redis, with a track record of shipping clean, well-architected code across multiple full-stack projects.

Education

Bachelor's Degree in Computer Science

October 2023 – 2027

Menoufia University – Faculty of Computers and Information

Computer Science Department

Relevant Coursework: Data Structures & Algorithms, Databases, Computer Networks, Operating Systems, Software Engineering

Experience

Freelance Backend Developer

November 2025 – Present

Self-Employed

Remote

- Delivered M5ZAN, a production-ready desktop ERP system for a client, handling everything from requirements gathering to deployment
- Deployed the system for a 5-person team, replacing manual workflows and eliminating paper-based tracking
- Optimized SQLite queries and data access layers, achieving 60%+ reduction in load times for inventory and financial reports
- Automated sales, invoicing, payroll, and inventory workflows, significantly reducing daily manual effort for the business
- Managed client communication independently, translating business requirements into technical solutions with minimal supervision
- Tech Stack:** Electron.js, Node.js, SQLite (better-sqlite3), IPC, JavaScript

Projects

Social App

Full-featured social media backend API built in TypeScript with a robust, modular architecture.

- Built 40+ RESTful API endpoints covering user management, posts, nested comments, and a full friendship system
- Engineered secure user management with JWT/2FA authentication and password reset functionality
- Implemented real-time one-on-one and group chat via Socket.IO, architected to handle concurrent connections under load
- Handled scalable file storage (profile pictures, attachments) by integrating AWS S3 with Multer
- Tech Stack:** TypeScript, Node.js, Express.js, MongoDB, Socket.IO, AWS S3, JWT, Multer
- Link:** <https://github.com/alyKhalid3/SocialApp>

E-commerce Backend

Scalable e-commerce backend with NestJS, clean architecture, and Redis caching for performance optimization.

- Designed and implemented 20+ API endpoints covering auth, product/inventory management, cart, orders, and coupon lifecycle
- Applied Redis caching to high-traffic routes, reducing repeated database hits and improving response times
- Integrated online payment processing and refund logic; applied RESTful API best practices
- Tech Stack:** Node.js, NestJS, MongoDB, JWT, Redis, RESTful APIs
- Link:** <https://github.com/alyKhalid3/E-commerce>

Technical Skills

Languages: JavaScript, TypeScript, C++, HTML5, CSS3

Backend: Node.js, Express.js, NestJS, GraphQL, Socket.IO, RESTful APIs, Authentication & Authorization, Middleware, Session Management

Tools & Cloud: Git/GitHub, Docker, Postman, JWT, OAuth 2.0, Google One Tap, AWS S3, Cloudinary, Nodemailer, Multer

Currently Learning: PostgreSQL, GraphQL (advanced patterns), System Design principles

Soft Skills

Problem-solving, Analytical Thinking, Attention to Detail, Self-Motivated, Team Collaboration, Adaptability, Time Management, Continuous Learning, Communication

Languages

Arabic (Native) English (Conversational)
